Specification

The examiner has not checked the specification to the extent necessary to determine the presence of **all** possible minor errors (grammatical, typographical and idiomatic). Cooperation of the applicant(s) is requested in correcting any errors of which applicant(s) may become aware of in the specification, in the claims and in any future amendment(s) that applicant(s) may file.

Applicant(s) is also requested to complete the status of any copending applications referred to in the specification by their Attorney Docket Number or Application Serial Number, **if any**.

The status of the parent application(s) and/or any other application(s) cross-referenced to this application, **if any**, should be updated in a timely manner.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 6-21, 25, 28, 32-37, 50, 54 and 58-63 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a process that mixes regenerated catalyst particles with 2% by weight coked particles at temperatures less than 550C, wherein carbon in the coke and oxygen in the catalyst are the only sources thereof in the reaction system does not reasonably provide enablement for the amendment to the claims that does not indicate that the last two lines of the claim specifically refer to conditions in step "c)" of the claimed process. The

Art Unit: 1755

specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. A reading of the specification would appear to indicate that criticality is associated with these conditions being present during the mixing step of the claimed operation.

Allowable Subject Matter

The prior art of record, either alone or in consideration, fails to anticipate or render obvious the instantly claimed processes for treating SAPO molecular sieves for the reasons set forth by applicant in the response of July 11, 2005. As can be clearly seen from the specification, there is a relationship in the obtained results of the reactivation/protection process being claimed, the temperatures and the absence of carbon and oxygen during step "c)" of the process. This was clearly not recognized by the prior art of record, particularly since most of the prior art causes mixing of coked and uncoked catalyst to take place in the presence of oxygen and carbon containing materials at temperatures in excess of those clearly shown to be critical in the instant process.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1755

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
